

Spring Cable Reels

EXEL

CONDUCTIX
wampfler

© DELACHAUX GROUP

Conductix - Wampfler designs and manufactures high-performance electrification systems for mobile equipment used in heavy industries such as iron and steel, food processing, cement manufacturing, pulp / paper mills, ports and terminals, tunneling, and mining.

The EXEL range of specialized cable reels provides the optimal solution for transferring power and control to mobile industrial machinery. It offers a high level of performance with maximum safety.

Automatic Spring Reels EXEL

☑ RELIABLE

The rugged, all-steel construction, effective corrosion protection, sealed for life, lubricated for life bearings, and high-performance springs made from textured steel, **provide exceptionally long life.**

100,000 spring movements - Guaranteed !

☑ SPECIFIC DESIGNS

Our modular design, wide variety of options and accessories, and selection of specific cables, enable us to build cable reels which **meet the exact specifications of each application.**

Many alternatives available !

☑ REACTIVE

The reels are selected using in-house software and assembled from stocked components to **guarantee you rapid delivery.**

Fast delivery !

☑ SIMPLE

Easy-to-access slip rings and connections, and brackets designed for easy installation **reduce the mounting and maintenance time.**

Quick installation, low maintenance !

☑ SAFE

IP55 protected, rolled edges on the spool, safe springs (the first wrap is riveted), spring-motor contained within the drum - all these characteristics mean that these reels **meet your requirements for safety during use and also during maintenance.**

CE marking !

Application Areas

- Power and control of mobile industrial machinery, such as overhead bridge cranes, gantries, mobile tables, aerial ladders and lifts, elevators, elevated work platforms, electromagnets, etc.
- Speed up to 80 m/min (cable retrieve application).
- Acceleration up to 0.3 m/s².
- The reels accept power and control cables with conductor cross-sections from 0.75 to 50 mm².
- Installations are possible with the reel winding and unwinding the cable vertically, or to a fixed point horizontally (with cable either supported or unsupported) or vertically.
- Primarily linear runs.
- Indoor or outdoor use with temperature ranging from -15°C to +40°C.

Applicable standards

EXEL reels are built in accordance with low voltage directive 73/23/CEE (19-02-1973) and machinery directive 98/37/CE (22-06-1998).

EXEL reels are usually intended to be integrated into the design of a machine. A declaration of the incorporation of the **CE** mark is supplied with the operation manual.

If the reel is equipped with a pre-wired cable and ratchet system, **CE** certificate can be supplied upon request at time of order.

Applications where the reels must conform to industry standards, or made by an ISO 9001:2000 registered company.

Along with the reels presented in this catalogue, we can also provide the following:

- Automatic hose reels for compressed air, liquids, and gases;
- Automatic reels adapted to particular special environments such as nuclear, chemical, etc.

Types of Applications

Lift

- Reel mounted stationary.
- Reel located at the top.

Vertical Retrieve

- Reel mounted stationary.
- Reel located at the bottom.

Retrieve

- Cable laying on the ground.
- Reel installed on the mobile machine.

Stretch

- Reel mounted on the machine.
- Unsupported cable.
- Only for short span runs.
- Cable sag 'f max' must be less than 10% of the travel length 'Ce'.
- Extra length of cable is required to compensate for cable sag 'f max' (approximately 10% of 'Ce').

Stretch

- Reel mounted stationary.
- Unsupported cable.
- Only for short span runs.
- Cable sag 'f max' must be less than 10% of the travel length 'Ce'.
- Extra length of cable is required to compensate for cable sag 'f max' (approximately 10% of 'Ce').

Supported Stretch

- Reel mounted on the machine.
- Cable supported with rollers.
- Extra length of cable is required to compensate for cable sag 'f max' (approximately 10% of 'Ce').

P : position that cable lays on the ground

H : height of the centerline of the reel above P

C : active travel length of the mobile machine

Ce : travel length to consider to calculate the reel

f max : maximum allowable sag of cable

e0 : distance to the first support

e : distance between supports

S : length of permanently paid out cable

Module Assembly

Sealed cable entry.

Spring Motor B

- Series or parallel mounting arrangement within the drum.
- Made of high-performance textured steel to assure long service life: **50,000 cycles** (100,000 spring movements) .
- Coil springs lubricated with a corrosion resistant grease.
- Safe during replacement as the first wrap is riveted.

Mounting Flange A

- Designed for easy and quick installation.
- Designed to accommodate optional brackets and accessories.
- Made from cast iron or cast aluminum alloy coated with black epoxy paint.

Slip Ring Assemblies **C**

- Designed to transfer power and control signals from the fixed part to the rotating part of the cable reel.
- Easy access to the slip ring terminals.
- Max. Voltage: 500 V AC/DC.
- AC cycles: 50, 60, or 400 Hz.
- Steel housing equipped with a breather to prevent condensation.
- Brass cable glands IP66 to ensure dust and moisture tightness of the housing.
- Construction and ring sizes designed to transfer currents from 50 mA up to 180A at an ambient temperature of +30°C.

Drums **D**

- Drum diameters ranging from 180 to 480 mm.
- Steel sheet construction protected by zinc electroplating and coated with a corrosion resistant finishing varnish.
- Rolled edges of the flanges optimizing cable arrangement and providing safety to users.
- Sealed for life, lubricated for life ball bearings.
- Assembled with zinc plated screws and lock washers.

Cables **E**

Conductix - Wampfler supplies a wide range of special cables designed to be used on reeling drums:

- Small outside diameter.
- Small bending radii.
- High resistance to mechanical stress from reeling applications (traction, deflection, twisting).
- Class 5 core assembly.
- Polypropylene or reticulate elastomer inner sheath .
- Polyurethane outer sheath.

Slip Ring Technical Data

Type	Amps ^(A)	Brushes		Rings	
		No ^(B)	Material	No	Material
C8	20A	2	Copper graphite	2 to 11 + T	Brass
C080	20A	2 or 4	Copper graphite	2 to 41 + T	Brass
P050	40A	2	Copper graphite	2 to 4 + T	Brass
P080	70A	2	Copper graphite	2 to 6 + T	Bronze
P120	120A	2	Copper graphite	2 to 6 + T	Bronze
P180	180A	2	Copper graphite	2 to 6 + T	Bronze

(A) : admissible permanent current @ +30°C. (B): number of brushes per ring.

Slip ring assembly 4TP050.

Self-regulated heating strip.

Special cables for reeling applications

Available upon request

Consult factory.

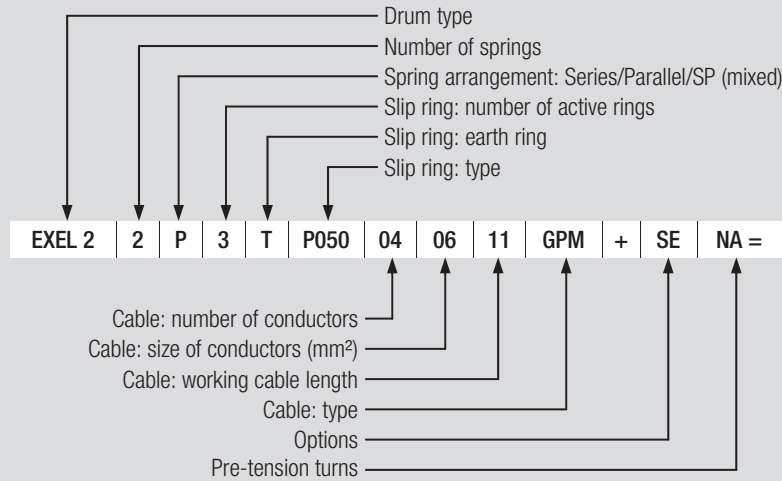

- Fixed cable tail fitted in the factory.
- Power slip ring assemblies (>20 A) with more than 6 active rings (phase) + E.
- Stainless steel screws.
- 5-year guaranteed special paint for sea coast applications.
- Protection degree IP66 for mechanical and electrical parts, or just the electrical part.
- Construction suited to low temperature applications down to - 40°C.

Accessories & Options

- Fixed brackets, cable guide arms and swivel brackets.
- Spring shock absorbers and cable grips.
- Roller guides and roller boxes.
- Cable entries and anchor drums.
- Ratchet to convert an automatic reel to an extension reel (mainly for use to tidy cables in the workshop).
- Nickel-plate brass and plastic cable glands.
- Two or four contact end limit switches.
- Self-regulated heating strip, 50W-230V single phase, within the slip ring housing. Required in humid conditions or where ambient temperatures vary widely.

Technical Description

Model Number Code

Cable Length

- Length of cable installed = working length + ΔL
- ΔL = one safety wrap on the drum + length needed to connect to slip ring.

Drum type	ΔL (m)

EXEL 2	2
EXEL 3	3
EXEL 4	4
EXEL 5	4
EXEL 6	5

Winding Direction Roller Guide Arm Positions

Unless otherwise indicated on the order, EXEL reels are built as per **Direction 1** and optional roller guide arm is located at **Pos 1.1**.

Reels not equipped with roller guide arm are delivered without any pre-tension set-

up turns. Before operation, the spring motor must be pre-tensioned with the appropriate number of pre-tension set-up turns 'NA' (see page 9), as indicated on the drum flange label.

Use of Roller Guides

When a roller guide (pulley / sheave) is used, it is necessary to increase spring motor torque and to maintain dimensions 'E' and 'G' as noted in the table below.

G (mm)	E (mm)	
	angle 3°	angle 5°
260	2 500	1 500
200	1 900	1 150
180	1 700	1 050
150	1 450	850
130	1 250	750
115	1 100	650
105	1 000	600

Spring Diagram

With coil springs, the tensile pull on the cable varies depending on the length of unwound cable and whether the reel is in the winding or unwinding mode. When calculating tensile pull, it is necessary to consider the diameter and number of cable wraps. According to these parameters, the amount of tensile pull exerted by the spring motor will vary.

- NA: number of pre-tension set-up turns
- TU: number of useable turns
- NR: number of reserve turns
- DCD: tensile pull at start of payout (unwinding mode)
- FCD: tensile pull at end of payout (unwinding mode)
- FCE: tensile pull at start of retraction (winding mode)
- DCE: tensile pull at end of retraction (winding mode)

Spring Motor Arrangements

In comparison with a single-spring motor:

- A motor with two identical springs in series allows twice the number of useable turns.
- A motor with two identical springs in parallel generates twice the tensile pull.

Spring Motor Data

Drum type	No of springs	Arrangement	NA mini	No of useable turns	Tensile pull Min. (kg)	Tensile pull Max. (kg)	Spring Part number
